Print Production Manager

Job and Job Queue Management Simplified

Print Production Manager allows users to control and monitor job progress through each step of the production environment. Up to five clients can access control over Fusion RIP channel data and exercise complete control over the production workflow. All from their workstations using standard browser applications.
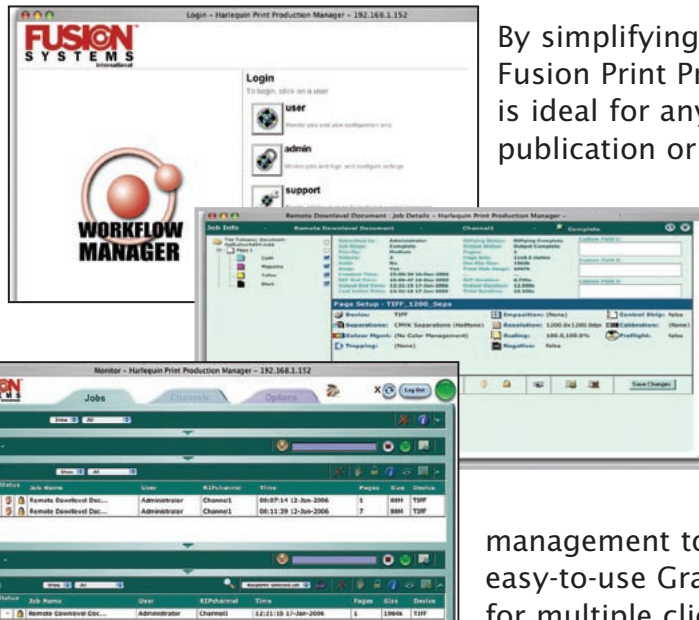

Accessing up to the minute information on page processing, plate output, queue loads, and other processes is easily accomplished from any location using Print Production Manager.

Jobs can be soft-proofing, approved or held, re-prioritized, resubmitted or removed. With Print Manager you are in control, while new files continue to be processed.

By simplifying these processes, the Fusion Print Production Manager is ideal for any busy newspaper, publication or commercial production environment. It can manage CtP and CtF plate production, or a combination of devices.

It is a true, everyday job management tool that employs an easy-to-use Graphical User Interface for multiple clients. Simply put, Print Production Manager keeps you informed, allowing you to make decisions that keeps work moving.

Makes Job and Job Queue Management simple

- Easy to operate, it's so simple that it can be used with very little training.
- Lower cost of entry compared to higher end workflow solutions.
- Saves time and money because process control is visual and simple.
- Accommodates up to five concurrent remote clients across the LAN.
- Extended ROAM functionality allows you to zoom, flip, scroll and rotate the image within individual channels.
- Contains a powerful file / job search capability.
- Places you in control of job processing and output.
